WATER & WASTEWATER DATA MANAGEMENT BUILT BY OPERATORS

SPEND LESS TIME MESSING AROUND WITH CLIPBOARDS AND SPREADSHEETS AND SPEND MORE TIME KEEPING YOUR FACILITIES RUNNING SAFELY AND EFFICIENTLY

COLLECT ALL YOUR DATA DIGITALLY

You don't have time to deal with collecting data by hand then typing it into a spreadsheet. Whether it's coming from SCADA, your hand, or a lab, get it into your monthly reports digitally the first time. Watch your staff collect and save live data from the office or your mobile device.

MAKE LESS MISTAKES

Don't wait until you type data into your spreadsheet to see that you might have a problem in the field. Wouldn't it be nice if your data collection system told you that "you might be wrong" with what you are typing in? Waterly calculates expected treatment and water quality parameters **on the fly in the field** and gives you immediate feedback that there might be a problem.

EASIER REGULATORY COMPLIANCE

Water & wastewater compliance reports are a reality and we believe you shouldn't have to worry about changing formulas, adjusting for how many days there are in the month, downloading a new template, or adjusting print margins. One click. Done.

WE GET OPERATORS

Water and wastewater operators simply have too much to do and know it's time to go digital before they retire. Whether you are a faithful water steward or are new to the industry, it's about time there is a cloud-based app made specifically for water that securely takes advantage of SCADA yet still knows it's the operator that makes water safe.

EXPAND YOUR CAPABILITIES BEYOND WATERLY WITH **WaterClick** PARTNERS

The water/wastewater industry needs reliable data from many sources to operate efficiently. While Waterly handles the core operational data, facilities often need data from many different sources. Historically, integrating these different sources was expensive and out of reach for many utilities. Not any more. WaterClick approved partners enable simple, direct integrations between your Waterly data select other, vetted, partners, all with no integration charges. Expand your data set to include things like power data, SCADA data, tank levels, and more with WaterClick partners.
